Concepts of Modern Physics by Arthur Beiser

The first topics considered are relativity and quantum theory, which provide a framework for understanding the physics of atoms and nuclei. The theory of the atom is then developed with emphasis on elementary quantum-mechanical notions, and is followed by a discussion of the properties of aggregates of atoms.

The two chief theories of modern physics present a different picture of the concepts of space, time, and matter from that presented by classical physics. Classical mechanics approximates nature as continuous, while quantum theory is concerned with the discrete nature of many phenomena at the atomic and subatomic level and with the complementary ...
