The definition of congruent triangles tells us that when two triangles are con- gruent, each pair of corresponding sides are congruent and each pair of corre- sponding angles are congruent. We use three pairs of corresponding parts, SAS, ASA, or SSS, to prove that two triangles are congruent.

When teaching triangle congruence, overlapping triangles appear at some point. I always teach students to draw the triangles separately before making any conclusions. This activity/demonstration helps students create overlapping triangles and separate them to see the triangles individually. First, fold one corner of a piece of paper to form a triangle.

A Since \overline{GF} is the same length in both triangles, the SAS Triangle Congruence Theorem can be used to justify $\overline{GF} \cong \overline{GF}$. B Since \overline{GF} is a segment shared by both triangles, the Reflexive Property of Congruence can be used to justify $\overline{GF} \cong \overline{GF}$. C Since \overline{GF} is on a leg of both triangles, the HL Triangle Congruence Theorem can be used to justify $\overline{GF} \cong \overline{GF}$.
