Computers are a fundamentally important tool in sport science research, sports performance analysis and, increasingly, in coaching and education programmes in sport. This book defines the field of ' sport informatics ', explaining how computer science can be used to solve sport-related problems, in both research and applied aspects. Beginning with a clear explanation of the functional principles of hardware and software, the book examines the key functional areas in which computer science is employed in sport, including: knowledge discovery and database development data acquisition, including devices for measuring performance data motion tracking and analysis systems modelling and simulation match analysis systems e-learning and multimedia in sports education Bridging the gap between theory and practice, this book is important reading for any student, researcher or practitioner working in sport

This volume contains the proceedings of the NATO Advanced Study Institute on "Image Sequence Processing and Dynamic Scene Analysis" held 21 June - 2 July, 1982 in Hotel Maritim, Braunlage/Harz, Federal Republic of Germany. The organizing committee of the institute consists of T.S. Huang (Director), H.G. Musmann (Co Director), H.H. Nagel (Consultant), and C.E. Liedtke and W. Geuen (Local arrangement). This Institute was devoted to the rapidly emerging field of image sequence processing and dynamic scene analysis which has many important applications including target tracking, television bandwidth compression, highway traffic monitoring, and analysis of heart wall motion for medical diagnosis. The lectures and discussions in this Institute fell into three overlapping categories: Motion estimation; pattern recognition and artificial intelligence techniques in dynamic scene analysis; and, applications. 1) Motion estimation - One of the most important problems in image sequence analysis and dynamic scene analysis is displacement and motion estimation. For example, in interframe coding using temporal DPCM, displacement estimation and compensation can improve efficiency significantly. Also, estimated motion parameters can be powerful cues in target segmentation, detection, and classification. In this Institute, a number of recently developed techniques for displacement and motion estimation were discussed.

Auch 2009 hat der Workshop „Bildverarbeitung für die Medizin“ erneut zum Ziel, aktuelle Forschungsergebnisse darzustellen und den Dialog zwischen Wissenschaftlern, Industrie und Anwendern zu vertiefen. Die Beiträge des Bandes - einige in englischer Sprache - behandeln alle Bereiche der medizinischen Bildverarbeitung, insbesondere Bildgebung, CAD, Segmentierung, Bildanalyse, Visualisierung und Animation, Roboter und Manipulatoren, Chirurgische Simulatoren, Diagnose, Therapieplanung sowie deren klinische Anwendungen.

Die Informatik selbst ist eine junge Wissenschaft, ihre Wurzeln aber reichen weit in die Vergangenheit zurück. Der Autor zeigt dies auf unterhaltsame Weise und gleichzeitig mit mathematischer Strenge anhand zahlreicher Facetten aus der Geschichte der Informatik. Die Beiträge sind über viele Jahre in der Zeitschrift Informatik Spektrum erschienen und erscheinen nun erstmals gesammelt als Buch.
