with repeat dosing on Day 7 if the patient was still hospitalized (13 patients received a second dose). Ninety percent of the ivermectin group and 97% of the usual care group received hydroxychloroquine (the majority received hydroxychloroquine in conjunction with azithromycin).

Ivermectin | COVID-19 Treatment Guidelines

Usually the vet will provide the appropriate dosage, but generally speaking, a dose of 0.3mg/kg once every two weeks is sufficient for the treatment of demodectic mange. The liquid version of Ivermectin is sometimes packaged in filled syringes with set amounts, which makes it easier to gauge the dosage levels.

Ivermectin For Cats | Cat-World

Ivermectin is a macrocyclic lactone that has been used since the 1980s for cows, sheep, goats or horses. Its antiparasitic activity is the reason why this treatment was extended to pet care, treating animals like dogs and cats. Ivermectin functions by paralyzing and, consequently, killing the parasites.
